28 June 2016

For the attention of: Kisapp Limited, Business Partners and Clients

IT Guarded Ltd, a CESG CHECK Accredited IT Security Company were engaged by Kisapp Limited in June 2016 to conduct an IT Security Health Check in line with OWASP Mobile testing methodology of the iPhone App, Kisapp, along with its hosting infrastructure.

The aim of the Security Health Check was to provide Kisapp Limited with visibility with regards to the current security status of the App and to provide assurance that the system is protected from penetration and compromise from intruders. That is, assuring that the system operates securely while providing Kisapp, its customers and business partners with the appropriate confidentiality, integrity and availability of information.

Considering the above, IT Guarded are satisfied that the risks identified have been mitigated and can confirm that the current version of the solution is secure in line with Industry Best practice namely the WASC Threat Classification v2.0.

Kind Regards

---

**Jonathan Meehan, CESG Check Team Lead**  
Technical Director, IT Guarded Ltd
